EDUCATION

New York University

B.S. in Computer Science, GPA: 3.71/4.0

M.S. in Computer Science

New York, NY

2022 – 2026

2026 – 2027

EXPERIENCE

Software Engineer Intern

May 2026 – Aug 2026

Google

New York, NY

- Built a live-streaming agentic marketing campaign drafting system for the Google Developer Program, automating 90% of the creation workflow by orchestrating specialized subagents and leveraging existing RPC endpoints
- Reduced marketing campaign creation time by 60% and enabled notification deployment across 40+ Google pages collectively reaching 40M users with over 10% click-through rate
- Authored an end-to-end design document evaluating 7+ architectural components and implementation approaches for the chat agent across frontend and backend, including A2UI, tool functions, MCP, skill, session persistence, and creation validation, to inform key architecture decisions.

Full Stack Engineer Intern

May 2025 – Aug 2025

Civic

Remote

- Implemented a text template module within a Rich Text Editor using TypeScript, PlateJS, and TailwindCSS, streamlining automation workflows and boosting user efficiency by 80%
- Engineered a collaborative comment tRPC system, enabling real-time updates for concurrent users and coordinating closely with design teams to ensure scalability and Agile development practices
- Built an AI integration pipeline using CopilotKit, AWS S3, and OpenSearch, improving solution accuracy by 30% and expanding adoption across 10+ client environments

Backend Developer Intern

Feb 2025 – May 2025

LikeLion US

Remote

- Integrated authentication and scheduling features with JWT, Google OAuth, and MySQL, decreasing manual scheduling time by 70% and increasing student session participation by 40%
- Built and maintained a multi-layered, test-driven development framework using Pytest and uv, achieving 100% coverage across 15+ API endpoints and ensuring reliable backend performance as user traffic grew by 40%
- Automated CI/CD pipelines via CircleCI and Docker, cutting release time in half and increasing deployment reliability by 25%

PROJECTS

RabbitMQ-like Distributed Queue | C++, Git

Nov 2025 – Present

- Leveraging knowledge of TCP sockets and low-level networking to build a RabbitMQ-like distributed message queue in C++
- Designing a centralized broker to coordinate producers and consumers and manage message flow
- Implementing enqueue, dequeue, and acknowledgment logic to ensure reliable message delivery over TCP

HTTPI: Command Line API Tester | Go, Git

Mar 2025 – Apr 2025

- Created a lightweight Go CLI for HTTP API testing, allowing flexible request composition and enhancing API development efficiency
- Strengthened understanding of client-server communication by building and debugging raw HTTP requests and responses

Image to Insurance Claim | FastAPI, AWS, React, MaterialUI, OpenAI, MySQL, Git

Feb 2025 – Feb 2025

- Incorporated the OpenAI API to analyze user-posted images and identify furniture with estimated pricing, achieving an average accuracy of 85% through finetuning and prompt engineering
- Implemented public AWS S3 to store and call images to allow asynchronous communication between FastAPI and AWS, allowing a scalable system that can serve hundreds of thousands of end users

TECHNICAL SKILLS

Languages: Python, Kotlin, Go, C++, TypeScript, JavaScript, HTML/CSS (SCSS, TailwindCSS), Swift

Databases: MySQL, PostgreSQL, MongoDB

Libraries/frameworks: FastAPI, Django, React, Angular, Next.js, Node.js, Apache Hadoop, MapReduce
